

# Archiving Projects

1

Eric Rechlin

HPCC 40<sup>th</sup> Anniversary Conference

22-23 October 2022

# I'm a bit of a data hoarder

2

- I've worked on a bunch of virtual collections of HP calculator materials over the years
- Biggest one is [hpcalc.org](http://hpcalc.org), the HP Calculator Archive, a collection of software and documentation for the HP graphing models
- This presentation focuses on two projects:
  - HP Calculator Literature Archive
  - HHC USB Drive

# HP Calculator Literature Archive

3

# HP Calculator Literature Archive

4

- Online at <https://literature.hpcalc.org>
- Intended to be both a list of and also a reliable source for all HP calculator documentation
  - Manuals from calculators and accessories
  - Third-party books related to HP calculators
- Idea started during conversations with HP in 2008
  - HP's site has been less-than-ideal, and many PDF downloads disappear
  - Also wanted to include scans of older manuals
- Site finally launched in limited form at HPCC 2020 in October 2020
- Rapid growth ever since, but it's close to where I want it

# What's in it?

5

- Serves as a bibliography of all known HP calculator literature
  - Over 2400 items listed, sortable and searchable, with metadata including ISBN/part numbers, publication dates, languages, and associated calculators

**All Known HP Calculator Literature**

# My scanning project

7

- Goal is to scan everything I can myself
- Equipment
  - Fujitsu fi-7160 automatic document feed scanner
  - Epson V850 Pro flatbed scanner
  - Martin-Yale 7000E stack paper cutter (for perfect bound books)
- Sources of books
  - Close to 600 lent by Richard Nelson
  - About 50 lent by Bob Prospero (with more coming)
  - About 60 from my own personal collection
  - Many others who have donated or lent books

# Scanning process

8

- Unbind book if feasible for ADF
  - Easy and reversible with spiral, comb, wire, stapled bindings
  - Destructive process with perfect bindings (softcover/hardcover)
  - Otherwise manually scan on flatbed
- Scan at 600 dpi (24-bit color or 8-bit grayscale)
- Only use lossless image compression
- Process images (automatic+manual)
  - Full details in my HHC 2021 presentation
- Render to 400 dpi (8-bit color or 4-bit grayscale) PDF with OCR and clickable bookmark list from table of contents

# Image processing steps

64 Using the Timer

### Stopping the Timer

The timer is stopped by pressing **ON** again. If you switch to RUN mode, times are again changed in format to HH.MMSShh. The display automatically changes to **OFF** for easier reading.

If you set the mode switch to either RUN or PRGM mode with the timer running, the timer will continue to run. If you then press **ON**, the timer will stop and the calculator will change to the mode selected. The timer can always be reset to 0.00.00.00 by pressing **ON** whether the timer is running or not.

### Changing the Display

The **ON** key in TIMER mode is used to switch the hundredths digits OFF and ON, whether the timer is running or not. Press **ON** once to switch the display of the hundredths digits OFF if you are not interested in watching them flash. Press **ON** again to relight these two digit places. The timer calculates times in hundredths regardless of the display setting.

**Note:** Whenever you switch to TIMER mode, these two digit places are lit regardless of the previous setting using the **ON** key.

### Taking Splits

You can also store intermediate time readings in registers R<sub>0</sub> thru R<sub>9</sub>. These "splits" are stored by pressing any of the digit keys (0 thru 9) while the timer is running. The time reading at that instant is stored in the corresponding register. In TIMER mode, these splits can be recalled merely by pressing the same digit key with the timer stopped. In RUN mode, these times are recalled conventionally by pressing first **ON** and then the corresponding digit key.

Now let's try an example.

Using the Timer 65

**Example:** Test your eye coordination by trying to take splits precisely at 1 second intervals for 10 consecutive splits. Then see how well you did. (Switch to TIMER mode for this problem.)

Press	Display	Description
<b>ON</b>	00.00.00 00	Zero starting time.
<b>ON</b>		Display is incrementing.
1	00.00.01 00	
2	00.00.02 00	
3	00.00.03 00	
4	00.00.04 00	Display continues to increment as you press these keys.
5	00.00.05 00	
6	00.00.06 00	
7	00.00.07 00	
8	00.00.08 00	
9	00.00.09 00	
0	00.00.10 00	Finally, stop the timer.
<b>ON</b>		

Now recall each split to the X-register by pressing the digit keys in succession to see how well you did.

### Adding and Subtracting Times

Often it is convenient to be able to add or subtract times in RUN mode in . . . H.MMSShh . . . format. On your HP-55 you can add two times (or angles) in the X- and Y-registers by pressing **+** **Y-MEM**.

To subtract a time in the X-register from a time in the Y-register in . . . H.MMSShh . . . format, press **-** **Y-MEM**.

**Example:** If you still have times stored in registers R<sub>0</sub> thru R<sub>9</sub>, find out exactly how well you did by calculating the mean and standard deviation of the differences of the stored values. (Switch to RUN mode for this problem.)

# The collection in raw numbers

11

- Presently, 1467 books are available for download
- Total page counts:
  - 80,211 pages in 518 books of original PDFs created by HP
  - 6,757 pages in 24 books of scanned PDFs created by HP
  - 84,866 pages in 701 books of PDFs scanned by me (all over last 2 years)
  - 9,494 pages in 62 books of original PDFs created by the user community (or myself)
  - 21,187 pages in 162 books of PDFs scanned by the user community and cleaned up by me
- Grand total: 202,516 pages taking 34.9 GB

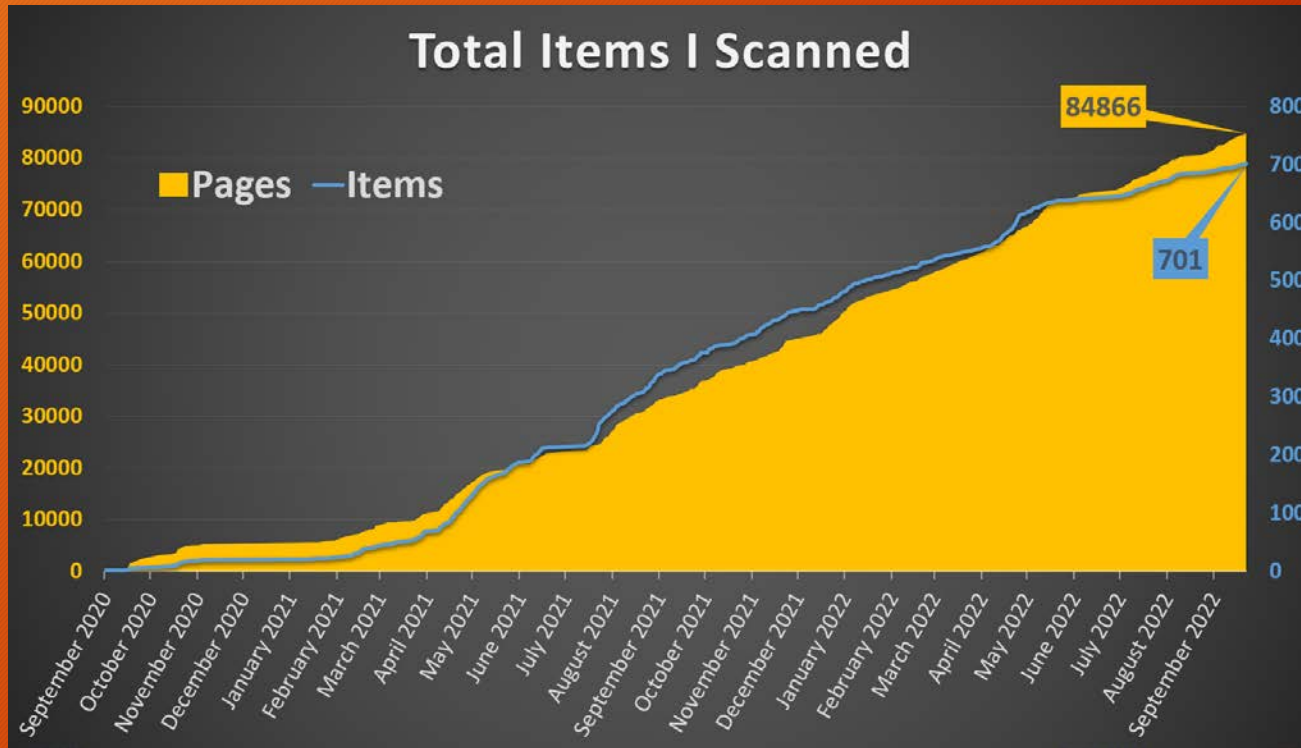

# Progress over time: total site size

12

# Progress over time: books I scanned myself

13

- English-language HP materials are nearly complete (556 total known)
  - Almost all calculator owner's manuals scanned (missing 2)
  - Almost all calculator quick references scanned (missing 2)
  - Most accessory/module documentation scanned (missing ~16)
  - Most application books scanned (missing ~27)
  - Most users' library books scanned (missing ~13)
  - Most service manuals scanned albeit usually photocopies (missing ~5)
  - Most internals (NOMAS) missing (only scanned a few out of ~20)
- Non-English HP materials are almost all missing (23 scanned of 387)
  - I don't even know what all I am missing (may be a lot more than 387!)
- Third party materials are perhaps one-third done
  - I've scanned 237 so far, and 59 more are original PDFs, with 755 known
  - About 100 have been scanned by others but I want to rescan

# How can you help?

15

- Lending me books to scan
  - Will unbind (without damage) books with **spiral, comb, wire, or stapled** bindings, then run through ADF, and then restore binding
  - Perfect bindings (including hardcover) must be cut to scan at present
    - Do not lend these if I cannot cut them
    - At some point in the future I may take the time to scan these by hand
- Providing me with 600 dpi grayscale or color scans
  - Ensure compression is minimal
  - Avoid any automatic processing (brightness/contrast, etc)
  - Put on Dropbox, OneDrive, Google Drive, etc for me
- Find candidates at <https://literature.hpcalc.org/all>
  - Anything with “Missing” in Format column has no known scans
  - Anything with “Off-site” in Download column has been scanned by others but could justify new scan

# HHC/HPCC Conference USB Drive

16

# What is this drive?

17

- Originally was a record of the annual American HHC conference, dedicated to HP calculators
- Now it is essentially a one-stop repository of the world's HP calculator knowledge, small enough to fit in your hand

# History of drive

18

- Conference proceedings packets sometimes had a floppy disk, or CDs or DVDs, with supplementary information
- Eventually this became a USB drive, with electronic proceedings replacing the printed version
- Started at 4 GB, eventually reached 32 GB in 2017, 64 GB in 2019, 128 GB for 2020 virtual conference, and now 256 GB
- Each drive is now cumulative, containing all previous drives
- Goal is to both document all conferences and contain all freely-available material related to HP calculators - with a bit of HP computers and non-HP calculators thrown in too

# Structure of drive

19

# HHC 2022 USB Drive

This USB drive is the official record of the HHC 2022<sup>[online link]</sup> conference.

HHC

## HHC Conference Materials

Contains materials from HHC conference floppies, CDs, DVDs, and USB drives from 1998 through 2022, plus many of the presentation files.

## HP Conference Videos

Contains captures of the talks presented at the live-streamed HPCC 2020 conference and HPCC January 2021 and October 2021 mini-conferences and videos recorded by Eric Rechlin of the talks presented at the HHC 2019 and 2021 conferences, along with a couple videos presented at earlier conferences, Gene Wright's training videos for financial calculators, and a few other videos.

Large Collections

## hp41.org

All the file downloads from Warren Furlow's hp41.org<sup>[online link]</sup> site, the Internet's largest collection of HP-41 resources, archived as of October 15, 2022. Based on the November 6, 2020 torrent copy of the DVD and manually updated with all updates made since then.

## hpcalc.org

An offline mirror of Eric Rechlin's hpcalc.org<sup>[online link]</sup> site, the Internet's largest collection of HP graphing calculator resources, with over 9000 items, archived as of August 31, 2022. Also includes historic older versions of all files ever on the site, plus allows direct browsing of the contents of all compressed archives.

## PPC Archive 2.41

A full copy of Jake Schwartz's vast collection of over 50,000 pages of information, including materials from various HP calculator clubs that were active in the 1970s to the present, plus materials from EduCALC and HP, current through April 1, 2022. Updates are available for purchase from Jake<sup>[online link]</sup>.

For the best experience, please go to the root of this drive and open "Open PPC Archive.pdf" in your favorite standalone PDF viewing software for interactive PDF-based navigation of the collection. It is highly recommended that you use a quality third-party PDF viewer to open these documents, such as Adobe Reader, Foxit Reader, Nitro PDF, PDF-XChange, or Sumatra PDF, because these PDFs have features that do not work properly within a web browser or with operating system built-in PDF viewers.

- Vassilis Prevelakis's HP Series 80 Web Site
  - From <https://www.series80.org>
  - Contains a complete browsable mirror of the web site as of June 13, 2020
  - Hundreds of files for the Series 80 machines, including manuals, programs, and ROM images
- Valentín Albillo's HP Collection
  - From <https://albillo.hpcalc.org>
  - Contains a complete browsable mirror of the web site as of September 22, 2022
  - Nearly 4000 pages of articles, programs, programming challenges, letters, brochures, pictures, and discussion threads, mostly about HP calculators and Sharp pocket computers

## HP Series 80 Web Site

### Introduction

The Series 80 is a collection of microcomputers that was released by Hewlett Packard in the late seventies. It offered a large number of accessories, including ROMs, adapters, and interface modules. The first member of the family, the HP-85 was targeted towards engineers. It was a compact machine comprising an integral screen, mass storage device (tape) and thermal printer. Although by no means lightweight, it was tuggable, HP even offered a carrying bag.

Other members of the family that did not include a printer or tape were the HP-83, the HP-87 which featured more memory and a wider display, and the HP-86 which provided an even larger screen in the form of an external monitor.

Mid-life improvements to the family included the HP-85B, the HP-87XM and the HP-86B. All offered additional built-in features and more memory.

Finally, there was also an embedded version of the HP-85 that was called the 9915A/B.

Although marketed as a single compatible family of computers, the Series 80 machines were split into two groups. The low-end comprising the HP-83 and HP-85, and the high-end with the HP-86 and HP-87 computers.

Subtle changes in the architecture necessitated *conversion* of BASIC programs between the two groups, and precluded the

## Valentin Albillo's HP Collection

Welcome to my HP site.

Latest Update #39 since Sept 22 (20 new files, 304 pages)

Since 2019, this ad-free, no-frills web site for my vintage calculator materials (HP SHARP, etc.), old HP computers and Misc topics (Computer Chess, Fractals) has been possible thanks to Eric Rechlin's generosity and invaluable help. It features Articles, Programs, Challenges, Pictures, Brochures, Book Reviews & Covers, Raw Scans of vintage materials and more, all free to download. There's now **1,110 files available** (thousands of pages) and more will be added periodically. Should you want to comment or ask something, [this is the thread to do it](#). For past Update announcements, [see here](#).

Click the lovely image to visit my daughter's art homepage

Update #39 highlights: 70 HP-41C programs, 5 Full brochures, 2 Raw Scans, 3 Challenges, 5 vintage letters, 4 Easter Eggs (for a list of all new files see Latest Additions below.)

- No corrections or changes.

Project HAM is now at 3,855 pages = 96.38% completed. See [Introducing Project HAM \(Historic Albillo Materials\)](#).

If you'd like to help, please include a link to this Main page into your own site and/or ask other related sites to do so, for increased visibility. It won't mean a cent but will do wonders to encourage me to spend the enormous effort required to prepare and upload more materials. Thanks !

## Subroutines

When the same set of instructions needs to be used at more than one point in a program, memory space can be conserved by storing those instructions as a single subroutine.

## The Mechanics

## Go To Subroutine and Return

The **GTO** (go to subroutine) instruction is executed in the same way as the **GTO** branch, with one major difference: it establishes a *pending return* condition. **GTO** label, like **GTO** label\*, transfers program execution to the line with the corresponding label (A to Z, 0 to 9 or 0 to 9). However, execution then continues until the first subsequent **RTN** instruction is encountered—at which point execution transfers back to the instruction immediately following the last **GTO** instruction, and continues on from there.

\* A **GTO** or **GTO** instruction followed by a letter label is an abbreviated key sequence (no **F** necessary). Abbreviated key sequences are explained on page 78.

## Henry Briggs and the HP35

I will start this article with a few words about Henry Briggs himself (1561-1630) who published in 1624 his book "Arithmetica Logarithmica" [1], describing a set of methods to help calculate tables of (common) logarithms.

Napier (or Neper) (1550-1617) is the inventor of the logarithms around 1614 ; Briggs and Napier agreed to redefine logarithms so they have 10 for base (what we call today "common logarithms").

In the following years Briggs published "common logarithms" tables and the method to compute them.

In fact, these base 10 logarithms tables were still in use in the 70s and the slide rule (which is a direct application of logarithms) was at this time a common engineer tool.

I have already explained how Hewlett-Packard with its HP35, introduced in 1972, revolutionized the engineering world.

No more logarithm tables or slide rule to handle. Just press a key.

I remember that time (the start of my career) and the day I put my fingers on a HP35. Immediately, I pressed  $\ln(x)$  and magically the result was there in around 200 ms!

Surprisingly, the internal algorithm was said to be based on a method close to the approach that described Briggs in 1624!

The present article is about the link -somewhat magical- between Briggs and the HP35.

Briggs' book is available on the Internet (in English) on the [Ian Bruce's site](#) University of Adelaide, Australia.

## Briggs "Golden rule"

Briggs organized his work in a simple way; genial ways are often simples.

A left column was supposed to contain the numbers ("numbers from continued means from 10 to 1") while in a right column he would write their logarithms.

He started with 10 and  $\log(10)=1$ .

Then he calculated repeated square roots of 10 and in the right column he placed the half of the preceding number:  $\log(\sqrt{n}) = (\log n) / 2$ .

I reproduced here the table from Briggs's book.

## THE NEW HP-67

**Fully Programmable  
Pocket Calculators**  
(Comes With 15 Pre-recorded Programs)

**A Complete Range Of  
Pre-recorded Functions And Features**

36 addressable memories simplify  
calculating and programming.

You can display and print in decimal,  
scientific, or engineering notation.

RPN - The professional logic  
system - gives added flexibility,  
speed and confidence.

All the mathematical functions you  
need.

The statistical functions you need.

**The HP-67 Gives You Exceptional  
Programming Power & Ease Of Use  
For Lengthy, Repetitive Calculations**

**\$450.00**

It's easy to create your own time-  
saving programs.

10 User-Definable Keys.

New "Smart" magnetic card reader  
makes every problem easier.

Indirect Control.

Programming power you won't  
outgrow.

Direct Branching.

Editing is fast and easy.

224 steps of program memory to  
work with.

Flags.

  - Manager of TI-99/4, 99/4A, CC-40, and CC-40+ programs
  - Nearly 150 scanned internal TI documents from 1977-1983

# Obtaining extra HHC 2022 USB drives

42

- Most of you here received one already
  - Additional drives will be available for purchase beginning November 1, 2022 from my web site at <https://commerce.hpcalc.org>
  - Price is US\$65 plus shipping
- Fine print: Most virus scanners will flag "ALREADY.COM" on this drive as a Trojan. This is understandable because of its functionality, but still a false alarm. Worse virus scanners will have other false alarms – ignore them, and even better, stop using them.
